A) Proof loads and tensile strengths are computed by multiplying the proof load stresses and tensile strength stresses given in Table 1 by the stress area of the thread.

The stress area of sizes and thread series not included in this table may be computed from the formula:  $A_s = 0.7854 \left[ D - \frac{0.9743}{n} \right]^2$  where D equals nominal diameter in inch, and n equals threads per inch.

B) Grades 5.2 and 8.2 applicable to sizes 1/4 through 1 in.
