

The following information is included to help you choose the right drill bit for your particular requirements

Terminology

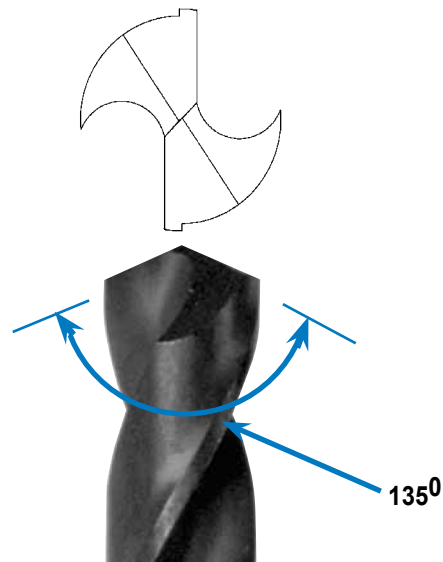

Point Types

118° Point

• General Use

135° Split Point

• For drilling tougher, harder materials, less tendency to "walk".

Great "Sheeters Bit"

Material Types

High Speed Steel (HSS)

- General Purpose
- Recommended for most drilling applications

Cobalt HSS

- Recommended for drilling through alloys, stainless steel, etc.

Titanium Nitride (TiN) Coated HSS

- Reduces friction - very wear resistant
- Ideal for production work and repetitive drilling
